

## WOMEN'S CONTRACEPTIVE COVERED PRODUCTS

We are committed to empowering you to know your coverage options for preventive care and make informed health care decisions. Under our Preventive Care Prescription Medication benefit, we cover options in each FDA approved contraceptive method category at no cost to you\*. Specifically, we cover generically available women's contraceptives at no cost to you. When no generic exists for an FDA-approved contraceptive method category, a brand-name women's contraceptive that is on our formulary will be covered for you at no cost. If your doctor believes that our covered contraceptives are medically inappropriate, you may request an exception by contacting Member Services at the number listed on the back of your member ID card.

\*This benefit may not be available to members of groups who have applied for a religious exemption from contraceptive coverage.
