1 INJECT EPINEPHRINE IMMEDIATELY

2 Call 911
Request ambulance with epinephrine.

Consider Additional Meds

(After epinephrine):

- » Antihistamine
- » Inhaler (bronchodilator) if asthma

Positioning

Lay the person flat and raise legs. If breathing is difficult or they are vomiting, let them sit up or lie on their side.

Next Steps

- » If symptoms do not improve, or symptoms return, more doses of epinephrine can be given about 5 minutes or more after the last dose.
- Transport to and remain in ER for at least4 hours because symptoms may return.

Do not depend on antihistamines. When in doubt, give epinephrine and call 911.
